## Hitachi 70 Crawler Excavator, High Power & Strong Excavation Ability

### PRODUCT DESCRIPTION

First of all, from the appearance point of view, the upper body still adopts the classic D-shaped structure, and the whole vehicle looks round and compact. The overall cab continues to use the current CRES cab, which is highly praised for its on-board comfort. The CRES cab has a corner pillar reinforced structure. The main parts are made of high-rigidity steel pipes, which improves the overall strength of the cab. In addition, the safety rails on the right side of the cab, lock bars, seat belts, emergency escape hammers and other facilities effectively ensure the safety of the driver. In view of China's operating environment, the new Hitachi model has specially improved the engine characteristics and upgraded it to a new electronic governor direct injection engine. The output power has also been further increased, improving fuel consumption and operating performance, and is more suitable for municipal construction and land use. Leveling, water conservancy construction and agricultural and forestry renovation projects.
